DECENTRALIZATION

Decentralized marketing is created on an automated contract that guarantees you maximum security and stability. A smart contract is an algorithm with automatic execution. It exists inside the Smart Chain blockchain*, Smart contracts, like cryptocurrencies themselves, are decentralized. They work strictly according to ascertain program, and once they are launched, it is impossible to change their mode of operation. The code that determines the logic of a smart contract is written in a blockchain, and all calculations are performed by millions of computers around the world. This ensures that a smart contract can not be hacked or stopped.
